EDUCATION

Civil Engineering - Bachelor of Engineering (BEng)

Toronto Metropolitan University

Toronto, ON

September 2020 - April 2025

- **Achieved Dean's List Status, Winter 2025:** Awarded for students achieving a minimum GPA of 3.5.
- **Geology Project Award – CVL423:** Awarded Best Project for geological research on Volcano Phases, using advanced modeling techniques.

Civil Engineering – Master of Engineering (MEng)

Toronto Metropolitan University

Toronto, ON

January 2026 - Present

SKILLS

CAD & Design: AutoCAD, Civil 3D, Revit, Navisworks, Bluebeam Revu, Autodesk ReCap, 2D Civil Drafting, Engineering Drawing Preparation

Transportation & Civil: Roadway Geometric Design, Intersection Design, Roadway Layout, Multimodal Transportation Design, Transportation Design Standards, HCS, Synchro

Design Coordination: Multidisciplinary Design Coordination, Drawing & Model Review, Clash Detection, Existing Conditions/LiDAR Capture, Technical Documentation, Constructability Coordination

Additional Software: MS Office Suite, Trimble FieldLink, MATLAB

Soft Skills: Critical thinking, Problem-solving, Effective communication, Teamwork and collaboration, Multitasking, Attention to detail.

WORK EXPERIENCE

Modern Niagara

VDC Designer

Vaughan, ON

January 2026 - Present

- Trained and supported 4 team members on standardized modeling and deliverable workflows across multiple active projects.
- Modeled piping systems and produced detailed spool drawings using Autodesk Revit, improving fabrication accuracy and reducing installation issues for the project team.
- Completed LiDAR scans using Trimble equipment to capture accurate site conditions, enabling design coordination based on real field data.
- Set up and organized Revit project environments, including model structures, templates, and shared parameters, increasing team efficiency and consistency.
- Supported BIM coordination and clash detection by identifying potential conflicts early, reducing field issues, rework, and coordination delays.
- Resolved modeling and coordination issues with engineers, designers, and project team members, strengthening alignment across multiple disciplines.
- Developed custom parametric Revit families to standardize recurring project components and support more consistent model production.

Modern Niagara

VDC Designer Coop

Vaughan, ON

May 2024 - October 2024

- Developed and maintained 3D BIM models based on project specifications and industry standards, contributing to accurate and coordinated design delivery.
- Participated in design coordination meetings with cross-functional teams, resolving conflicts and keeping project requirements aligned.
- Supported fabrication-focused modeling, improving installation planning and reducing design revisions.
- Reviewed design alignment across multiple trades, identifying potential clashes before construction.
- Prepared schematics, workflows, and handover documentation, improving communication between design, fabrication, and project teams.

PROJECTS

Capstone Project – CVL72A/B

AutoCAD, Roadway & Intersection Design, 2D Civil Drafting, Multimodal Transportation Design

Engineering Student

September 2024 - April 2025

- Led the design of two urban transportation infrastructure concepts involving **Scarborough Town Centre transit integration and the Jane & Finch LRT corridor**, coordinating roadway, transit, pedestrian, and cycling requirements into cohesive engineering designs.
- Developed an approximately **36 m multimodal roadway cross-section in AutoCAD**, incorporating vehicle lanes, cycling facilities, sidewalks, and an approximately **7.4 m LRT right-of-way** while applying roadway geometric design and transportation safety principles.
- Designed approximately **3.3 m vehicle lanes, 1.6 m cycling facilities, and 2.1 m sidewalks**, balancing vehicle operations with pedestrian, cycling, and transit requirements within a constrained urban corridor.
- Produced and revised **2D transportation engineering drawings using AutoCAD and Bluebeam Revu**, identifying and resolving geometric and spatial conflicts during design review.
- Coordinated technical documentation, design revisions, and team responsibilities across **two transportation infrastructure concepts**, contributing to an **A+ final capstone grade**.

Roadway & Intersection Design Project – CVL207

AutoCAD, 2D Civil Drafting, Roadway Layout, Intersection Design, Geometric Design

Engineering Student

September 2020 - January 2021

- Developed a detailed **2D AutoCAD roadway and intersection design**, incorporating multiple transportation infrastructure components while applying roadway layout and geometric design principles.
- Prepared a coordinated engineering drawing showing roadway geometry and supporting infrastructure, translating design requirements into a clear technical CAD deliverable.
- Evaluated vehicle circulation, intersection functionality, surrounding site constraints, and environmental considerations to refine the proposed roadway layout.
- Reviewed and revised drawing geometry, dimensions, and presentation to produce a coordinated final design package, earning an **A+ project grade**.
